

# MATERIA®

Pressrelease 2016-11-10

## Materia introduces Fox.

*Fox is ready for launch after meticulous work where Carl Öjerstam's design converged with Materia's uncompromising choice of materials and production methods. It's a stackable chair/armchair with a straightforward design that can cope with the stringent flexibility and durability demands placed by public spaces and modern offices.*

Fox is a chair/armchair where form and materials meet in an uncomplicated design. A detail that simplifies things for users and is available as standard, is the newly-developed linking device which is built into the chair's/armchair's stacking protection. The solid wooden top on the armrests has no visible fixings which gives the armchair an elegant look.

Fox is available in white pigmented ash, white stained ash or black stained ash and can be non-upholstered, have an upholstered seat or be fully upholstered. The armrests' finish matches the seat shell. When fully upholstered the armrests' finish are optional. The 4-legged frame is available in chrome alt. white, black or silver grey powder coating.

Design: Carl Öjerstam
