Design meets news.

Furnish flexibly with Stack.

Stack makes it simple to furnish – regardless of few or many seating places.

Stack and Stack+, design Fredrik Mattson.

Easy to carry and simple to stack.

The Stack chair and armchair is a flexible way to furnish all types of meeting and assembly rooms. The range of chairs is light and can be very tightly stacked, making it easy to move and adapt the furnishing for different activities. In addition, Stack is linkable to help make space-efficient and neat groupings. The range is available in several different colours in polypropylene and in several different kinds of wood, as well as with different frames and finishes. Writing tablet, stacking trolley and transport carriage as an optional extra. Follow the link for more information.

A new piece of furniture in the class.

Stack+ is a match for the tough requirements that apply in school environments, while the elegant design also makes it comfortable to sit on.

Stack+ withstands use.

Stack+ chair and armchair is a further development of Stack and is manufactured and tested to cope the particularly hard stresses faced by furniture in school environments. Examples are the robust 4-legged frame and the reinforced back. Also, Stack+ can be stacked tightly in order to save space and the linking function makes it simple to line up several Stack+s. Transport carriage as an optional extra. Follow the link for more information.
