

New products 2020

MATERIA®

# Design meets new products.

Our range is broad and exciting, with innovative and inspiring design. Always with consideration for the meeting between people, no matter where, when and how it happens. When it comes to choice of materials and manufacturing methods, we are uncompromising. One of our goals is therefore to ensure, by means of the FSC® (Forest Stewardship Council) certification, that all products containing wood come from responsibly managed forests. Furthermore, our Colours by Materia (CbM) concept is growing, with new products and additional colours. All of this matters when design meets new products.

The mark of  
responsible forestry

# Colours by Materia.

Furnishing with colour gives you more opportunities to surprise, blend in or stand out. Colours by Materia (CbM) is our answer to everyone with an open mind. For a long time, flexibility has been synonymous with Materia. In order to emphasise this, we are now introducing three new CbM colours. With beige, mustard yellow and burgundy red, the palette is even more diversified. Dusty pink, rusty red, blue grey, green, grey, dark grey, black, and white have already created harmony and also stretched the boundaries. They are all available as standard for a number of our products. Be coloured by the choices.

The products that come with CbM as standard are: Alto easy chair/sofa/table, Anagram chair/armchair, Crest bench/easy chair/sofa/table, Hopper table, Motus stool/chair, Neo Lite bar stool/chair/armchair/easy chair, Pax chair, Pilot conference chair, Rocca stool, Today daybed, Uni table, Vagabond table, Vagabond Duo table, Vagabond Project table, and Vagabond Screen table.

## Newcomer 2020.

The design scene is home to a number of promising young talents just waiting to meet their public. The Newcomer award is our way of honouring these young bold designers. Since the award was established in 2006, we have provided an international platform for young designers reaching out and making a name for themselves in a highly competitive industry. We see the Newcomer award as an opportunity to add a touch of playfulness to our range and think even further outside the box.

The 2020 winner is Alexander Rehn and the product is called Rocca. Alexander comes from Munich, Germany, where he studied interior architecture and product design at The Academy of Fine Arts.

Alexander had a clear idea for his product from the start. He noticed how sedentary we have all become, especially in our offices. His aim was to create a playful stool inspiring the body to move, a way of staying active.

What makes the Rocca stool unique is its simplicity. The ring encourages movement and the seat is comfortable, together they interact to form a unit. At the same time the stool is easy to carry around the modern activity-based office. The name Rocca is a play on “rocking chair”, as you sit and rock on the stool.

# Rocca stool.

Design: Alexander Rehn

The Rocca stool has a playful design that helps the body to keep active. The steel tubing gives the stool a minimalistic appearance, something that also makes it unique. The ring encourages movement and the seat lets you sit comfortably. Together they form a unit that interacts. A different kind of seating that is easy to carry around in activity-based meeting places. Frame in chrome or CbM powder coating.

## Anagram chair/armchair.

Design: Fredrik Mattson

With its strong identity, Anagram can be perceived in different ways. With its robust frame and well-thought-out details, the chair can handle rough environments. The legs loop up behind the backrest, providing an elegant, easy-to-grip handle, making the chair easy to move. The seat and back are available in white pigmented or black stained ash, and clear lacquered oak. The die-cast aluminium buttons, running all the way through, match the colour of the frame and give the chair character. Frame in chrome or CbM powder coating. A specially designed linking device is available as an optional extra. Stackable.

## Motus chair.

Design: Marie Oscarsson

The Motus chair radiates self-confidence and attitude while being versatile and adaptable. Together with the Vagabond table series, it creates an exciting innovation and a completely mobile way of furnishing. Motus is suitable as a meeting chair in different environments. The back attachment has a beautifully designed bracket that enhances the feel of the design. The castors make it easy and flexible to move around. The frame is available in chrome or CbM powder coating.

# Pilot conference chair.

Design: Fredrik Mattson

Pilot is a conference chair with an enhanced sense of support and an inviting design. The gently sloping backrest gives character, but above all comfort. Details such as the gently arched armrests and the opening between the seat and the backrest create a functional design. Pilot is height and tilt adjustable as well as rotatable, giving a flexible and ergonomic way of sitting. Choose between castors and glides. The frame is available in CbM powder coating.

## Alto table.

Design: Mattias Stenberg

This practical and elegant side table is fitted directly on the Alto sofa, low or high seating. The table is small enough to blend into the environment without getting in the way, while large enough to accommodate for example a cup and a mobile phone. When positioned between two seats, the surface can be shared with a neighbour. Because the table is hinged, it can be turned aside to make it easy to sit down on the sofa and then turned back over the legs. The table top is available in solid white pigmented ash and clear lacquered oak with tray edge. Attachment arm in chrome or CbM powder coating.

## Hopper table.

Design: Mattias Stenberg

Hopper is a practical table with an attention-grabbing design. The possibility of adjusting the height of the table, 535-730 mm, makes it adaptable to other furniture and environments. The function is activated by pressing the button on the table top. The technical features are concealed in the pillar design. Rotatable glides are a detail that enables you to pull the table closer towards you. The table top is available in metal, glass or solid wood. The solid wood top in white pigmented ash and clear lacquered oak has an attractive tray edge. Metal top and frame in CbM powder coating. The frame is also available in chrome for table tops in glass and wood.

# Vagabond Project table.

Design: Marie Oscarsson

Vagabond Project has a classic design with well-balanced proportions combined with modern functionality. It is a flexible table on castors, with many areas of application such as offices, restaurants and schools. The simple design makes it possible to create changeable environments. The table is available in several formats, with heights of 730 or 900 mm. Electrical sockets and/or USB sockets and an accessory box recessed into the table top are available as an option. The accessory box has space for plants, notepads and pens, etc. The table top is available in white pigmented ash, clear lacquered oak and white HPL laminate. Frame and accessory box in CbM powder coating.

# Vagabond Screen table.

Design: Marie Oscarsson

Vagabond Screen is a project and meeting table which combines form with function. It fits well into for example office environments, schools and conference venues. Mounting brackets can be hung onto the table end to enable simple fitting of a screen. A whiteboard or accessory boxes can be mounted on the opposite side to conceal the back of the screen. The table top is available in white pigmented ash, clear lacquered oak and white HPL laminate, height 730 or 900 mm. Power is available as an optional extra, including a socket under the table top for the screen, an electric box in the table top with three electrical sockets plus two USB, one HDMI and one network socket. Frame, mounting brackets, accessory box and hooks in CbM powder coating.
